# Cartesian product (review)

Let

$A = \{a_1, a_2, \dots, a_k\}$  and

$B = \{b_1, b_2, \dots, b_m\}$ .

The Cartesian product  $A \times B$  is defined by a set of ordered pairs

$\{(a_1, b_1), (a_1, b_2), \dots, (a_1, b_m), \dots, (a_k, b_m)\}$ .

Cartesian product defines a product set, or a set of all ordered arrangements of elements in sets in the Cartesian product.

# Binary relation

**Definition:** Let  $A$  and  $B$  be two sets. A **binary relation** from  $A$  to  $B$  is **a subset** of a Cartesian product  **$A \times B$** .

- Let  $R \subseteq A \times B$  means  $R$  is a set of ordered pairs of the form  **$(a,b)$  where  $a \in A$  and  $b \in B$** .
- We use the notation  **$a R b$**  to denote  $(a,b) \in R$  and  **$a R b$**  to denote  $(a,b) \in R$ . If  **$a R b$** , we say  $a$  is related to  $b$  by  $R$ .

Example: Let  $A=\{a,b,c\}$  and  $B=\{1,2,3\}$ .

- **Is  $R=\{(a,1),(b,2),(c,2)\}$  a relation from  $A$  to  $B$ ?**

- if  $a R b$  then draw an arrow from  $a$  to  $b$ .

$a \rightarrow b$

**Example:**

- Let  $A = \{0, 1, 2\}$ ,  $B = \{u, v\}$  and

$$R = \{ (0, u), (0, v), (1, v), (2, u) \}$$

- Note:  $R \subseteq A \times B$

	u	v
0	x	x
1		x
2	x

- $P(1)$ : There is a path of length 1 from  $a$  to  $b$  if and only if  $(a,b) \in R^1$ , by the definition of  $R$ .

Proof (math induction):

- **$P(1)$** : There is a path of length 1 from  $a$  to  $b$  if and only if  $(a,b) \in R^1$ , by the definition of  $R$ .

There is a path of length  $n+1$  from  $a$  to  $b$  if and only if there exists an  $x \in A$ , such that  $(a,x) \in R$  (a path of length 1) and  $(x,b) \in R^n$  is a path of length  $n$  from  $x$  to  $b$ .

# Path length

Theorem: Let  $R$  be a relation on a set  $A$ . There is a path of length  $n$  from  $a$  to  $b$  if and only if  $(a,b) \in R^n$ .

Proof (math induction):

- **$P(1)$ :** There is a path of length 1 from  $a$  to  $b$  if and only if  $(a,b) \in R^1$ , by the definition of  $R$ .

**Show:  $P(n) \rightarrow P(n+1)$ :** Assume there is a path of length  $n$  from  $a$  to  $b$  if and only if  $(a,b) \in R^n \rightarrow$  there is a path of length  $n+1$  from  $a$  to  $b$  if and only if  $(a,b) \in R^{n+1}$ .

There is a path of length  $n+1$  from  $a$  to  $b$  if and only if there exists an  $x \in A$ , such that  $(a,x) \in R$  (a path of length 1) and  $(x,b) \in R^n$  is a path of length  $n$  from  $x$  to  $b$ .

$(x,b) \in R^n$  holds due to  $P(n)$ . Therefore, there is a path of length  $n + 1$  from  $a$  to  $b$ . This also implies that  $(a,b) \in R^{n+1}$ .
